

CALACATA CARRARA

Category: calacata

Colour: white

Petrographic name (according EN 12407): Marble

Macroscopic description: A breccia lithotype with clasts flattened according to the schistosity planes. The material is fine-grained and compact. ivory white Millimetric opaque minerals stand out with yellow-brown veins in places associated with light brown patches. Where the veins occur, a concentration of iron oxides (pyrite) can be seen up to plurimillimetric in size.
