

CALACATA VAGLI

Category: calacata

Colour: white

Petrographic name (according EN 12407): Marble

Macroscopic description: A marble breccia composed of monogenic clasts that are pure white in colour and range from sub centimetric to pluridecimetric in size with a sub parallel orientation. The clasts have light grey millimetric flecks in places as well as more or less slender amber yellow-coloured veins. Their edges are very distinct and can be straight or slightly sutured. They are immersed in an abundant groundmass that is golden yellow verging on brown in colour.
