

PERLATO OLYMPO

COLOUR

Beige

MACROSCOPIC DESCRIPTION

The Perlato Olympos marble, also known as Breccia Sardegna, is extracted in Sardinia, in the province of Nuoro. The veined variety, brown background, is crossed by fairly straight veins and its streaks can cross the plates horizontally or diagonally; In the latter case, the peculiarity of the material is to be suitable for making suggestive open-floor pavements.

Perlato Olympos may require special treatments, such as vacuum resin. Its coloring makes the material elegant and perfect in conjunction with other light beige marbles, including Botticino. We can find it with polished, honed, brushed and hammered finish, however suitable for large projects, being applicable not only in the interior but also in exteriors with mild climate.
