

KENYA BLACK

Colour: Black

Macroscopic description: Kenya Black marble is a distinctive stone noted for its deep black color, enhanced by captivating white and grey veins that give it a dramatic and modern appearance. Extracted from quarries in Kenya, from which it also takes its name, this marble is appreciated for its elegance and versatility, making it an ideal choice for various types of projects.

Kenya Black marble is characterized by a compact structure that guarantees excellent resistance to wear and scratches. These properties make it particularly suitable for flooring, wall cladding, and countertops, as well as for creating decorative objects. Its low porosity ensures effective resistance to liquid absorption, reducing the risk of stains and making cleaning and maintenance easier. For this reason, Kenya Black marble is also suitable for more humid environments such as bathrooms and kitchens.

With a water absorption coefficient of approximately 0.2% and a density of about 2.8 g/cm³, Kenya Black demonstrates exceptional structural performance. Its surface, available in polished or honed finishes, offers refined aesthetics and long-lasting brilliance. The versatility of Kenya Black makes it suitable for a wide range of applications, from high-end interior design to large architectural projects.

Explore the elegance of Kenya Black marble at GMP Graniti, Marmi e Pietre, and transform your spaces with a material that combines exceptional aesthetics and performance.
